Agricultural Software Directory

PREFACE

Locating and selecting the right agricultural software for on-farm and institutional use can be difficult and occasionally frustrating. The purpose of the Agricultural Software Directory is to make that task easier. This publication lists all the agricultural software packages we could find that are distributed in North America.

This is the ninth edition of the Agricultural Software Directory since 1985. The number of listings has grown from 500 to over 750 in that time, and the number of manufacturers has grown from 100 to over 130. This edition is the fourth joint publication of information on farm computing by the Ontario Ministry of Agriculture, Food and Rural Affairs, and Alberta Agriculture, Food and Rural Development.

The information contained in this Directory is also available on the Canada-wide FBMInet system. For more information, please contact the Farm Business Management Branch in Olds at (403) 556-4240, or the Ontario Ministry of Agriculture, Food and Rural Affairs at (519) 767-3227.

Special thanks to the software manufacturers who responded to our request for new listings and additional information. Their cooperation makes this publication possible and ensures its accuracy.

Please note: A zero under any of the categories in a listing indicates information was not available at the time of printing. When a range of prices is given, this usually reflects various combinations of features and enhancements. For packages listed from the United States, prices are given in US dollars because of fluctuations in currency exchange rates. Some of the packages may not be available in your area because of trademark and copyright regulations and/or a company's service policy.

The agricultural software industry is in a constant state of change; consequently, the data contained in this publication is also subject to change. More detailed and current information should be obtained directly from the software manufacturers (refer to listing at the back of this publication).

Your comments, suggestions and corrections are most welcome. Please forward any correspondence to:

HOW TO USE THIS PUBLICATION

This publication is divided into three parts:

Software category codes	iii
Software listing sorted by category, manufacturer, product name	1
Manufacturer index and products manufactured	75

.....

Step One: Use the software category codes to identify your area of interest. For example, Nutrition/Ration/Fertilizer Analysis software is listed under category code 300. Further, if you are specifically interested in Dairy Ration Formulation software, you will find it listed under category 302.

Step Two: Find the software packages by going to the listings in the product name/manufacturer table. A brief description of what the software does, and some technical information including memory, disk drive and printer requirements is also listed. Please note that software packages available from the United States are listed in US dollars, due to the fluctuation in exchange rates.

Most of the software listed in this directory is available only for IBM compatible computers. If the software is available for other systems, a code will appear after the company name. The codes and corresponding computers are listed below.

Computer Codes:

A – APPLE II SERIES	E – COMMODORE VIC 20	I – RADIO SHACK I, III, IV
B – MACINTOSH/LISA	F – CP/M-80	J – RADIO SHACK II
C – COMMODORE 8032	G – IBM & COMPATIBLE	K – VECTOR GRAPHICS
D – COMMODORE C64	H – ATARI 1040ST	L – DIGITAL EQUIP. CORP.

Step Three: Contact the software manufacturer to obtain information on dealers in your area, program features and example reports. To contact a manufacturer, simply note the manufacturer's name and refer to Manufacturer Index. The index lists all the software manufacturers in alphabetical order and includes a mailing address, telephone number, and all software packages available from each manufacturer.

Step Four: Evaluate product features against your needs and select the package that best meets your needs. For more information on the selection process, refer to the publication *Selecting Farm Software* available from the Farm Business Management Branch.
